

# Monthly Market Review

## July 2024 Market Review

### Returns as of July 31, 2024

Source: FactSet

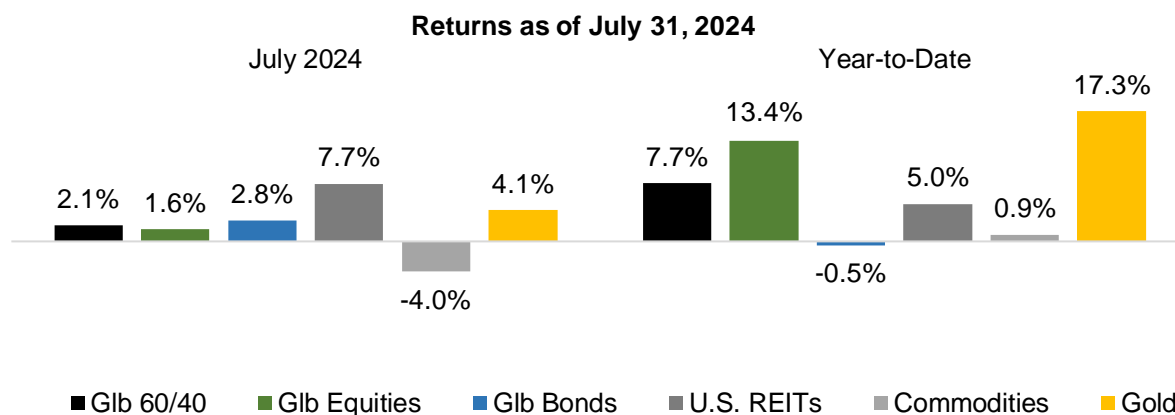

July had a volatile end to the month but nevertheless finished with gains. Cooling inflation and the third month of rising unemployment increased investors' expectations for interest rate cuts later this year. As a result, equities experienced rotations out of earlier winners into more beat-up areas of the market. International developed equities led broad regions with a gain of 3.0% thanks to strong performance from Japan and the UK. The S&P 500 had a more muted 1.2% gain as the technology-heavy index suffered from rotations into undervalued stocks. Emerging market equities were held to a narrow gain of 0.4%, with emerging Asia pulling the index down, particularly from China, as it continues to experience challenges in its real estate sector.

The rotation in markets was most visible across U.S. equity sectors and styles. Within U.S. sectors, growth-focused technology and communication services, the two top-performing sectors of the year, were the only sectors to experience declines in July, while value sectors such as real estate, utilities, and financials led in performance. Similarly, in style, small-cap equities had a stellar month and gained 10.8%, given their sensitivity to rate cuts.

Broad bond markets all saw gains, with their regional indices outperforming their equity counterparts. Increasing expectations of interest rate cuts globally drove returns for more interest rate-sensitive bond classes. Longer-duration government bonds outperformed their short-term counterparts, and higher-quality bonds outperformed high-yield bonds.

Commodities was one of the few areas to struggle in July with the broad index down 4%. Energy was the primary detractor from the index as demand concerns weighed on investors as a result of weakening economic data. Gold was one of a few areas within commodities that finished positive as market volatility was elevated and the U.S. dollar fell. U.S. REITs gained 7.7%, rebounding after struggling most of 2024 and benefitting from expectations of rate cuts increasing.

The global 60/40 balanced portfolio returned 2.1% in July, with the main contributions coming from bonds and international developed equities. Relative to the blended index, global bonds, U.S. REITs, and gold outperformed, while commodities and global equities underperformed for the month.
